Tips, Tricks and How to's

Custom Series 2020+

Home Connect

Getting your hot tub online

From the convenience of a smartphone, tablet or computer you can monitor or adjust all major functions of the spa. Before you can utilize Web connect you must first connect your spa to your home network.

GOOD -Your new Arctic Spa Custom Series hot tub is equipped with WIFI on board. Connecting your spa via WIFI is done by linking the spas signal wirelessly to your home router. Understand that in some situations this may not be possible.

BETTER - Ethernet Over Power Module. The internet signal is carried across the power lines in your house and in most cases does not require any additional running of wires or cables. One module connects inside the hot tub and the other into a wall outlet with a cable running into your router.

BEST - CAT5 network cable. Connecting your spa directly to your home router through a directly connected wired cable.

To gain access to onSpa® remotely you will need to create an on-line account by visiting www.myarcticspa.com.

onSpa® Features:

- Set temperature, filtration cycles, ozone production (if peak 2 installed)
- Turn on/off all pumps, lights etc
- Access Power Management and set time of day usage
- Access SpaBoy® (if installed as an option)
- Allows dealer to access functions of spa (if web connected)
- Plus more...
