# LocP/LocF

The topside control panel of your Arctic Spa is designed to allow you to control almost everything your spa has to offer. Though there are times you want to prevent your settings or features from being accessed or used, that is where the **LocP** & **LocF** features come into play.

**LocP** stands for Partial Lock, while **LocF** stands for Full Lock. These features allow you to have control over what features are accessible to whoever is using the spa.

The **LocP** will allow just the basic features to be accessed (pumps, blower, lights, SDS & YESS). The **LocF** will completely lock down the topside control panel.

To access these features you will press and hold either the pump 1 for pre 2020 or SDS for 2020+ buttons for 5 seconds for the **LocP**, 10 seconds for the **LocF** and to unlock the topside you will press and hold the same button again for 5 seconds.

- a) When pressing and holding to unlock the topside you will want to see **Unloc** on the topside control panel.
